Course Code : ITA0512

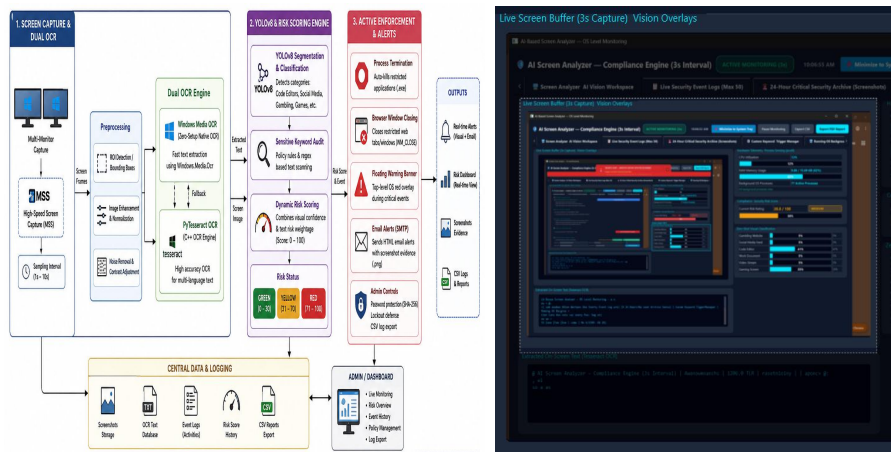

Slot : A

Course Name : Computer Vision

Course Faculty : Dr. Christy Melwyn

Project Title: Vision-Based Real-Time Screen Layout Analysis and Background Anomaly Detection

Module Photographs:

Project Description:

I contributed significantly to the design and development of the Vision-Based Real-Time Screen Layout Analysis and Visual Anomaly Detection System by focusing on Module 1: Screen Capture and Dual OCR.

In addition, I was actively involved in implementing screen capture, image preprocessing, and Dual OCR techniques using Windows Media OCR and PyTesseract to convert visual screen content into structured textual information. I also contributed to improving the accuracy and efficiency of the text extraction process and ensured that the extracted information could be smoothly passed to the subsequent YOLOv8 visual analysis and dynamic risk scoring modules.
